

Exaai — Second SaaS Application Review

Developer Implementation To-Do List — Color Coded

This document consolidates the second review into a developer-facing checklist. The colors indicate implementation priority.

Priority Legend

Priority	Meaning
CRITICAL	Fundamental to product quality, workflow, or reliability.
MUST	Required; any stated MVP/final distinction should be respected.
IMPORTANT	Important for the final product, but not necessarily immediate.
OPTIONAL	Useful enhancement that can be implemented later.
SIDE REMARK	Small usability improvement that does not affect core generation logic.

1. LOGIN

SIDE REMARK	■ Add an eye icon to the password field so the teacher can show/hide the password while typing.
-------------	---

2. PARAMETERS

CRITICAL	Text length: Replace the current options with exactly 120–150 words and 150–200 words .
CRITICAL	Difficulty: Add a Difficulty dropdown. It must control vocabulary difficulty and grammar-structure complexity in the generated text.

Reasoning: The text is the core product output and the first major thing the teacher evaluates. Its quality represents a disproportionately large part of the perceived value of Exaai.

3. TEXT GENERATION

CRITICAL	Paragraphs: Generated texts must be properly divided into coherent paragraphs.
CRITICAL	Generate Another Text: Place the new version in the alternative-text box; do not automatically replace the original.
CRITICAL	Make Harder / Simpler: Generate the modified version in the alternative box first. The teacher decides whether to replace the original.
CRITICAL	Source: A source citation is obligatory for every generated text.
CRITICAL	Multiple sources: Add a dropdown under the text allowing the teacher to choose which source is cited.
CRITICAL	Text boxes: Original and alternative boxes must have the same dimensions and display the entirety of their respective texts.

Strategic reasoning: If the first generated text is excellent by teacher standards, the core product succeeds. Text generation is also likely to consume significant AI credits, so better first-generation quality can reduce unnecessary regeneration and costs.

4. PART ONE — READING COMPREHENSION

CRITICAL	Exact wording: Task instructions must use the wording specified in the provided exam guide exactly where official wording is prescribed.
CRITICAL	Tables: Whenever a task requires a table, generate the actual table in the exam.
CRITICAL	Task-specific rules: Some questions need individually redesigned explanations/rules so the AI can reproduce them reliably. These will be supplied later.
CRITICAL	Additional teacher-standard rules: Include agreed task-design practices that are not explicitly stated in the official guide. These will be determined later.
CRITICAL	Statement/question counts: Correct the number of statements/questions so every task follows the required structure.

Core solution: Redesign the AI-facing representation of the exam guide. Translate the official guide into a clear operational rule system covering task type, exact wording, item count, marks, order, stream differences, required tables, formatting, and agreed teacher-standard practices. The official guide remains the source of the rules; the AI receives a straightforward structured version.

CRITICAL — DISCUSS	Alternative tasks: The current alternatives are too constrained by the text. A proposed solution exists and should be discussed separately before becoming a final implementation rule.
---------------------------	--

5. PART B — TEXT EXPLORATION

CRITICAL	Broader content: Tasks do not need to be strictly constrained to the selected reading text. They may draw from the broader theme/content of the selected unit, while remaining appropriate to level, skill and Ministry requirements.
CRITICAL	Tables: Whenever a task requires a table, generate the actual table with the appropriate structure.

Reasoning: This expands the available material for task generation, increases variety, and makes alternative tasks more effective without breaking the connection to the selected unit.

QUICK DEVELOPER CHECKLIST

Use this page as the implementation checklist.

Priority	Implementation item
SIDE REMARK	■ Password visibility eye icon
CRITICAL	■ Length options: 120–150 / 150–200 words
CRITICAL	■ Difficulty dropdown controls vocabulary + grammar complexity
CRITICAL	■ Proper text paragraphs
CRITICAL	■ Generate Another Text → alternative box
CRITICAL	■ Harder/Simpler → alternative box first
CRITICAL	■ Teacher chooses whether to replace original
CRITICAL	■ Source citation obligatory
CRITICAL	■ Multiple sources → source-selection dropdown
CRITICAL	■ Original/alternative boxes same dimensions
CRITICAL	■ Entire text visible in both boxes
CRITICAL	■ Reading task wording follows guide
CRITICAL	■ Required tables actually rendered
CRITICAL	■ Redesign AI-facing exam-guide rules
CRITICAL	■ Add task-specific rules
CRITICAL	■ Add teacher-standard rules
CRITICAL	■ Correct statement/question counts
CRITICAL — DISCUSS	■ Discuss solution for text-constrained alternatives
CRITICAL	■ Text Exploration can draw from wider unit theme
CRITICAL	■ Required Text Exploration tables actually rendered
