

Exaai — MVP Review & Development To-Do List

Direct implementation reference for the developer. Items are organized by process and priority.

Priority definitions: ■ Critical — essential to product vision/correctness | ■ Must — required, but may be deferred where stated
| ■ Important — final-version priority | ■ Optional — future enhancement

MVP = required for MVP **Final** = required for final product **MVP if possible** = preferred for MVP without significantly delaying testing.

1. GENERAL WORKFLOW

■ Critical — Final / MVP optional

- Unify the exam-building workflow into one workspace/page.
- Text, Part One, Part B/Text Exploration, and Written Expression should eventually appear as sections of the same exam rather than separate tabs.
- The teacher should be able to move naturally between the text and questions, similar to reviewing a traditional exam.
- Maintain the ability to edit generated content throughout the process.

MVP: The existing separate-tab structure can remain if changing it would significantly delay the MVP.

2. PARAMETER SETTING

2.1 Topic Selection

■ Critical — MVP + Final

- Significantly expand topic suggestions.
- Provide at least 20+ relevant topic options for the selected unit.
- Topics should suit the selected level, grade, stream and unit.
- Give the topic-selection area considerably more visual space.
- Replace the current simple list presentation with a more suitable topic-selection interface; exact interface to be discussed separately.
- Topics should be based on authentic/adapted source material rather than randomly generated AI topics.
- When the teacher enters a custom topic/keyword, Exaai should suggest related topics based on relevant authentic/adapted sources.
- Custom-topic suggestions should behave more like search suggestions than random AI-generated ideas.

■ Must — Final / MVP optional

- Align available units with the actual Ministry syllabus.
- Ensure units correspond correctly to the selected level, grade and stream.

2.2 Teacher Keywords

■ Must — Final / MVP optional

- Add a field where the teacher can enter keywords/concepts that should appear in the generated text.
- The generated text should attempt to naturally incorporate these keywords.

3. TEXT GENERATION

3.1 Text Modification

■ Must — MVP if possible + Final

Current issue: Modifying the current text creates another alternative instead of modifying the text being worked on.

Required:

- Modifying the text should replace/update the current text.
- The modified version becomes the active text.
- Add an Undo function to return to the previous version.
- Do not add every modification as another alternative text.

Desired flow: Current Text → Modify → Modified Current Text → Undo if needed

3.2 Authentic/Adapted Sources

■ Critical — MVP if possible + Final

- Generated texts should come from authentic/adapted online sources rather than being entirely AI-created.
- The source used should be identifiable and automatically cited at the end of the text.
- The system should retrieve/select appropriate source material according to topic and learner level.
- The text may be adapted to the required learner level while maintaining source authenticity.
- The exact criteria for acceptable authentic/adapted sources will be provided separately.

MVP: Implement if technically feasible without significantly delaying MVP constraints.

3.3 AI Assistance Inside the Text

■ Optional — Future

- Select text and request: simplify, make more advanced, rephrase, find synonyms, change vocabulary/word choice, summarize. Not required for the core MVP.

4. PART ONE — READING COMPREHENSION

4.1 Answer Key

■ Must — MVP + Final

- Keep answer-key generation.
- Ensure answers correspond correctly to every generated task.
- Eventually cover all supported task types.

4.2 Ministry Guide Compliance

■ Critical — MVP + Final

The current Part One does not sufficiently follow the 2017 Ministry Guide.

- Use the 2017 Ministry Guide as the reference for Part One generation.
- Correct the number of statements in tasks such as True/False.
- Correct the number of questions required.
- Correct the variety of task types.
- Correct the number of tasks.
- Ensure task structure changes according to the selected stream.
- Ensure marks correspond to the required structure.
- Ensure the task combination is appropriate for the selected exam configuration.
- The official 2017 guide will be provided as reference.

4.3 Change Task

■ Critical — MVP + Final

- Change Task should offer different types of tasks, not merely different versions of the same task.
- Alternatives must be permitted by the Ministry Guide, appropriate for the selected stream and generated text, and respect the correct marks.
- Maintain/improve the existing alternative-task popup concept.

Example: True/False → Change Task → another valid comprehension task.

5. PART B — TEXT EXPLORATION

5.1 Morphology Task Format

■ Must — MVP + Final

- Add the appropriate table format for morphology tasks where required.
- Tasks involving transformations such as Noun → Verb, Verb → Noun, Adjective → Noun, etc. should use an appropriate table rather than plain text.
- Table structure should adapt to the generated task.

5.2 Ministry Guide Compliance

■ Critical — MVP + Final

- Review Part B against the official 2017 Ministry Guide.
- Ensure correct task types, order, number of tasks, marks, exam/stream alignment and intended language-skill assessment.

6. PART TWO — WRITTEN EXPRESSION

6.1 Ministry Guide Compliance

■ Important — Final

- Review Written Expression against the official Ministry Guide.
- Ensure correct number and type of writing topics.
- Ensure correct marks.
- Ensure correct distinction between guided and free writing.
- Ensure structure corresponds to the selected exam/stream.
- Ensure writing situations and instructions follow the appropriate exam format.

7. PRIORITY OVERVIEW

Area	Priority	MVP	Final
Unified exam workspace	Critical	Optional	Yes
Expanded topic database	Critical	Yes	Yes
20+ topic suggestions	Critical	Yes	Yes
Better topic-selection interface	Critical	—	Yes
Authentic/adapted source texts	Critical	If possible	Yes
Ministry syllabus units	Must	Optional	Yes
Teacher keyword field	Must	Optional	Yes
Modify current text + Undo	Must	If possible	Yes
Answer key	Must	Yes	Yes
Part One Ministry compliance	Critical	Yes	Yes
Part One task variety	Critical	Yes	Yes
Change Task = different task type	Critical	Yes	Yes
Part B morphology tables	Must	Yes	Yes
Part B Ministry compliance	Critical	Yes	Yes
Written Expression Ministry compliance	Important	—	Yes

Area	Priority	MVP	Final
AI assistance inside text	Optional	—	Future

8. MVP PRIORITY ORDER

1. Ministry-compliant Part One — correct task structure, numbers, variety, marks and stream requirements.
2. Proper Change Task functionality — replace a task with a different valid task type.
3. Better topic selection — substantially expand the topic pool with 20+ relevant options.
4. Authentic/adapted text generation — implement source-based texts if feasible within MVP constraints.
5. Text modification + Undo — modify the current text rather than creating another alternative.
6. Part B Ministry compliance — bring the existing Part B into compliance with the guide.
7. Morphology tables — add the correct visual structure for morphology tasks.
8. Answer key — keep and refine the existing functionality.
9. Teacher keywords — allow specification of vocabulary/concepts that should appear in the text.
10. Unified workspace — preferably implement in MVP, but do not delay MVP testing if it requires substantial restructuring.

9. FINAL-VERSION PRIORITIES

- Unified exam workspace.
- Accurate Ministry syllabus/unit structure.
- Comprehensive source-backed topic discovery.
- Authentic/adapted source retrieval.
- Teacher keyword control.
- Full Ministry-compliant generation across all exam sections.
- Proper task replacement system.
- Correct tables and specialized task layouts.
- Written Expression compliance.
- Contextual AI assistance inside the text.
